

ABSTRACT OF THE DISCLOSURE

A locking neck ring device that is placed over a capped bottle or container and grips the bottle neck ring, and together with a padlock or other securing means, prevents access to the bottle cap. The locking device comprises a clamp member that jackets a capped bottle neck; a cover which fits over the clamp member causing it to clamp on to the neck below the neck ring, and means to hold the clamp member to the cover. Provision is made for attaching a padlock or other securing means which holds the locking ring device in place. The bottle or container cap can then not be accessed for removal. The device is applicable to all sizes of drug containers, wine and liquor bottles for effectively locking access to the container contents.
